## Relationship between real and imaginary part of eigenvalues

---

## Relationship between real and imaginary part of eigenvalues

---

Consider

$$L_R \psi := \left( \frac{1}{k^2} \frac{r}{R} \psi_r \right)_r + n^2(r) \frac{r}{R} \psi = \frac{\gamma^2 R}{k^2 r} \psi, \quad 0 < r < \infty.$$

## Relationship between real and imaginary part of eigenvalues

---

Consider

$$L_R\psi := \left( \frac{1}{k^2} \frac{r}{R} \psi_r \right)_r + n^2(r) \frac{r}{R} \psi = \frac{\gamma^2 R}{k^2} \frac{R}{r} \psi, \quad 0 < r < \infty.$$

Multiplying with  $\psi^*$  both sides to above equation and integrating both sides we get

## Relationship between real and imaginary part of eigenvalues

---

Consider

$$L_R\psi := \left( \frac{1}{k^2} \frac{r}{R} \psi_r \right)_r + n^2(r) \frac{r}{R} \psi = \frac{\gamma^2 R}{k^2 r} \psi, \quad 0 < r < \infty.$$

Multiplying with  $\psi^*$  both sides to above equation and integrating both sides we get

$$\underbrace{\lim_{r \rightarrow \infty} \frac{1}{Rk^2} r \psi_r \psi^*}_{?} - \underbrace{\int_0^\infty \frac{1}{Rk^2} r |\psi_r|^2 dr}_{\text{Real}} + \underbrace{\int_0^\infty n^2(r) \frac{r}{R} |\psi|^2 dr}_{\text{Real}} = \underbrace{\frac{\beta^2 - \alpha^2 - 2i\alpha\beta}{k^2}}_{\text{Complex}} \underbrace{\int_0^\infty \frac{R}{r} |\psi|^2 dr}_{\text{Real}}. \quad (4)$$

# Relationship between real and imaginary part of eigenvalues

Consider

$$L_R\psi := \left( \frac{1}{k^2} \frac{r}{R} \psi_r \right)_r + n^2(r) \frac{r}{R} \psi = \frac{\gamma^2 R}{k^2 r} \psi, \quad 0 < r < \infty.$$

Multiplying with  $\psi^*$  both sides to above equation and integrating both sides we get

$$\underbrace{\lim_{r \rightarrow \infty} \frac{1}{Rk^2} r \psi_r \psi^*}_{?} - \underbrace{\int_0^\infty \frac{1}{Rk^2} r |\psi_r|^2 dr}_{Real} + \underbrace{\int_0^\infty n^2(r) \frac{r}{R} |\psi|^2 dr}_{Real} = \underbrace{\frac{\beta^2 - \alpha^2 - 2i\alpha\beta}{k^2}}_{Complex} \underbrace{\int_0^\infty \frac{R}{r} |\psi|^2 dr}_{Real}. \quad (4)$$

Asymptotic expansion of the  $\psi$  for  $r \rightarrow \infty$

$$\psi \sim A_c \sqrt{\frac{2}{\pi n_c k r}} \exp -i \left( n_c k r - \gamma R \frac{\pi}{2} - \frac{\pi}{4} \right). \quad (5)$$

Ref: K.R. Hiremath, M.Hammer, R. Stoffer, L. Prkna, and J. Čtyroký, Analytic approach to dielectric optical bent slab waveguides. Optical and quantum electronics, 37(1),2005, pp.37-61.

## Relationship between real and imaginary part of eigenvalues

---

## Relationship between real and imaginary part of eigenvalues

---

Using asymptotic expansion in Eq. (4), one gets

$$\beta = |A_c|^2 \frac{1}{\alpha R \pi} \exp(\alpha R \pi), \quad (6)$$

where  $|A_c|$  is arbitrary constant.

## Relationship between real and imaginary part of eigenvalues

Using asymptotic expansion in Eq. (4), one gets

$$\beta = |A_c|^2 \frac{1}{\alpha R \pi} \exp(\alpha R \pi), \quad (6)$$

where  $|A_c|$  is arbitrary constant.

Shows the relationship between phase propagation constant  $\beta$  and attenuation constant  $\alpha$ . At  $\alpha_c = \frac{1}{R\pi}$ ,  $\beta$  changes its behavior. For finite  $R$ ,  $\beta \rightarrow 0$ .

- Assume that  $|S_{rr}| \ll |S_r^2|$  as  $r \rightarrow \infty$ , we get
 
$$S \sim \pm in_c kr = S_0$$

- Let  $S(r) = \pm in_c kr + S_1(r)$ , and  $|S_1(r)| \ll |in_c kr|$ . From Eq. (10)

$$S(r) \sim S_0(r) + S_1(r) \sim \pm in_c kr - \frac{1}{2} \ln r + S_2(r).$$

# Asymptotic expansion of eigenfunctions

Bent mode profile for large  $R$

- For the asymptotic analysis,  $n(r) = n_c$ 

$$r^2\psi_{rr} + r\psi_r + (n_c^2k^2r^2 - \gamma^2R^2)\psi = 0. \quad (9)$$
- Leading behavior of the solution  $\psi(r) = e^{S(r)}$ , one gets
 
$$r^2(S_{rr} + S_r^2) + rS_r + (n_c^2k^2r^2 - \gamma^2R^2) = 0. \quad (10)$$
- Assume that  $|S_{rr}| \ll |S_r^2|$  as  $r \rightarrow \infty$ , we get
 
$$S \sim \pm in_c kr = S_0$$

- Let  $S(r) = \pm in_c kr + S_1(r)$ , and  $|S_1(r)| \ll |in_c kr|$ . From Eq. (10)

$$S(r) \sim S_0(r) + S_1(r) \sim \pm in_c kr - \frac{1}{2} \ln r + S_2(r).$$

- On putting  $S(r)$  back in  $\psi(r) = e^{S(r)}$ , one gets  $\psi(r) = \frac{1}{\sqrt{r}} e^{\pm in_c kr + S_2(r)}$ .

# Asymptotic expansion of eigenfunctions

Bent mode profile for large  $R$

- For the asymptotic analysis,  $n(r) = n_c$ 

$$r^2\psi_{rr} + r\psi_r + (n_c^2k^2r^2 - \gamma^2R^2)\psi = 0. \quad (9)$$
- Leading behavior of the solution  $\psi(r) = e^{S(r)}$ , one gets
 
$$r^2(S_{rr} + S_r^2) + rS_r + (n_c^2k^2r^2 - \gamma^2R^2) = 0. \quad (10)$$
- Assume that  $|S_{rr}| \ll |S_r^2|$  as  $r \rightarrow \infty$ , we get
 
$$S \sim \pm in_c kr = S_0$$

- Let  $S(r) = \pm in_c kr + S_1(r)$ , and  $|S_1(r)| \ll |in_c kr|$ . From Eq. (10)

$$S(r) \sim S_0(r) + S_1(r) \sim \pm in_c kr - \frac{1}{2} \ln r + S_2(r).$$

- On putting  $S(r)$  back in  $\psi(r) = e^{S(r)}$ , one gets  $\psi(r) = \frac{1}{\sqrt{r}} e^{\pm in_c kr + S_2(r)}$ .
- Asymptotic behavior of mode  $\psi$  will be proportional to  $\frac{1}{\sqrt{r}}$ .
