Figure: Elements in a space of geodesic triangulations X .

$X = X(\mathbb{D}^2, T)$ is a six dimensional manifold.

Is X connected? What is the homotopy type of X ?

Figure: A diffeomorphism of the square³

$Diff(\mathbb{D}^2)$ - the diffeomorphisms group fixing $\partial\mathbb{D}^2$ pointwise.

³Figure: Wikipedia

$$X(\mathbb{D}^2, T) = \{\text{simplexwise linear homeomorphisms}\}$$

$X(\mathbb{D}^2, T)$ as an approximation of $Diff(\mathbb{D}^2)$.

Question:

$$Diff(\mathbb{D}^2) \simeq X(\mathbb{D}^2, T)?$$

Conjecture (Connelly-Henderson-Ho-Starbird 1984)

$$\text{Diff}(S) \simeq X(S, T).$$

Surface S	$\text{Diff}(S)$	$\text{Diff}(S) \simeq X(S, T)?$
\mathbb{D}^2	*	Yes (1984)
\mathbb{S}^2	$SO(3)$	
\mathbb{T}^2	\mathbb{T}^2	
S_g	*	

Conjecture (Connelly-Henderson-Ho-Starbird 1984)

$$\text{Diff}(S) \simeq X(S, T).$$

Surface S	$\text{Diff}(S)$	$\text{Diff}(S) \simeq X(S, T)$
\mathbb{D}^2	*	Yes (BCH,1984) and No(L, 2020)
\mathbb{S}^2	$SO(3)$	Open
\mathbb{T}^2	\mathbb{T}^2	Yes (EL, 2021, LWZ, 2021)
S_g	*	Yes (LWZ, 2021)
