Basic properties of
the kernels

Weighted
 L^2 -estimates for
the $\bar{\partial}$ -operator

Pluricomplex
Green Function

Upper Estimates

Lower estimates

In particular,

$$S(z, z)/K(z, z) = (1 - |z|^2)/2n \sim \delta/n.$$

- ▶ $b\Omega$ is smooth, strictly pseudoconvex:

$$S(z, z)/K(z, z) \sim \delta(z)/n$$

(Hörmander; Fefferman; Boutet de Monvel-Sjöstrand)

- ▶ $b\Omega$ is C^∞ , pseudoconvex in \mathbb{C}^2 or convex in \mathbb{C}^n and of finite type:

$$S(z, z)/K(z, z) \lesssim \delta(z)$$

(Catlin; J.Chen; Nagel-Rosay-Stein-Wagner; McNeal;
McNeal-Stein...)

- ▶ $b\Omega$ is C^∞ , pseudoconvex in \mathbb{C}^2 or convex in \mathbb{C}^n and of finite type:

$$S(z, z)/K(z, z) \lesssim \delta(z)$$

(Catlin; J.Chen; Nagel-Rosay-Stein-Wagner; McNeal; McNeal-Stein...)

- ▶ Relating mapping properties of the Bergman and Szegő projections. (Boas-Straube; Nagel et al; Bonami-Charpentier; Cumenge; Ligocka; Koenig...)

Goal: Study boundary behavior of S/K on diagonal

Main theorem

$\Omega \subset\subset \mathbb{C}^n$, $b\Omega$: C^2 -smooth, pseudoconvex.

► Upper estimate: For any $\varepsilon \in (0, 1)$,

$$\frac{S(z, z)}{K(z, z)} \lesssim \delta(z) |\log \delta(z)|^{n/\varepsilon}.$$

Comparison of the
Bergman and

- ▶ δ -regular: \exists bounded continuous $\varphi \in psh(\Omega)$ and a defining function ρ of Ω such that

$$\partial\bar{\partial}\varphi \geq \partial\bar{\partial}\rho/\rho$$

- ▶ Every δ -regular domain is hyperconvex with a positive D-F exponent.

- ▶ δ -regular: \exists bounded continuous $\varphi \in psh(\Omega)$ and a defining function ρ of Ω such that

$$\partial\bar{\partial}\varphi \geq \partial\bar{\partial}\rho/\rho$$

- ▶ Every δ -regular domain is hyperconvex with a positive D-F exponent.
- ▶ If $b\Omega$ has a psh defining function or is pseudoconvex of finite D'Angelo type, then Ω is δ -regular.

- ▶ δ -regular: \exists bounded continuous $\varphi \in psh(\Omega)$ and a defining function ρ of Ω such that

$$\partial\bar{\partial}\varphi \geq \partial\bar{\partial}\rho/\rho$$

- ▶ Every δ -regular domain is hyperconvex with a positive D-F exponent.
- ▶ If $b\Omega$ has a psh defining function or is pseudoconvex of finite D'Angelo type, then Ω is δ -regular.
 - ▶ Case I: psh defining function $\Omega = \{\rho < 0\}$.
 $\partial\bar{\partial}\rho \geq C\rho\partial\bar{\partial}|z|^2$. Take $\phi = C|z|^2$.

- ▶ δ -regular: \exists bounded continuous $\varphi \in psh(\Omega)$ and a defining function ρ of Ω such that

$$\partial\bar{\partial}\varphi \geq \partial\bar{\partial}\rho/\rho$$

- ▶ Every δ -regular domain is hyperconvex with a positive D-F exponent.
- ▶ If $b\Omega$ has a psh defining function or is pseudoconvex of finite D'Angelo type, then Ω is δ -regular.
 - ▶ Case I: psh defining function $\Omega = \{\rho < 0\}$.
 $\partial\bar{\partial}\rho \geq C\rho\partial\bar{\partial}|z|^2$. Take $\phi = C|z|^2$.
 - ▶ Case II: finite type. By Catlin, \exists bounded continuous λ ,
 $\partial\bar{\partial}\lambda \gtrsim \partial\bar{\partial}|z|^2/\delta^\varepsilon$. Take $\phi = C(\lambda - (-\rho)^\eta)$, $\eta \ll \varepsilon$.

- ▶ δ -regular: \exists bounded continuous $\varphi \in psh(\Omega)$ and a defining function ρ of Ω such that

$$\partial\bar{\partial}\varphi \geq \partial\bar{\partial}\rho/\rho$$

- ▶ Every δ -regular domain is hyperconvex with a positive D-F exponent.
- ▶ If $b\Omega$ has a psh defining function or is pseudoconvex of finite D'Angelo type, then Ω is δ -regular.
 - ▶ Case I: psh defining function $\Omega = \{\rho < 0\}$.
 $\partial\bar{\partial}\rho \geq C\rho\partial\bar{\partial}|z|^2$. Take $\phi = C|z|^2$.
 - ▶ Case II: finite type. By Catlin, \exists bounded continuous λ ,
 $\partial\bar{\partial}\lambda \gtrsim \partial\bar{\partial}|z|^2/\delta^\varepsilon$. Take $\phi = C(\lambda - (-\rho)^\eta)$, $\eta \ll \varepsilon$.

Basic properties

$$K_{\Omega}(z, z) = \sup\{|f(z)|^2 \mid f \in A^2(\Omega), \|f\|_{\Omega} \leq 1\}$$

and

$$S_{\Omega}(z, z) = \sup\{|f(z)|^2 \mid f \in H^2(\Omega), \|f\|_{b\Omega} \leq 1\}$$

Comparison of the

main results

Basic properties of
the kernels

Weighted
 L^2 -estimates for
the $\bar{\partial}$ -operator

Pluricomplex
Green Function

Upper Estimates

Lower estimates

Basic properties

$$K_{\Omega}(z, z) = \sup\{|f(z)|^2 \mid f \in A^2(\Omega), \|f\|_{\Omega} \leq 1\}$$

and

$$S_{\Omega}(z, z) = \sup\{|f(z)|^2 \mid f \in H^2(\Omega), \|f\|_{b\Omega} \leq 1\}$$

- Localization property: U a neighborhood of $z^0 \in b\Omega$:

$$K_{\Omega \cap U}(z, z) \lesssim K_{\Omega}(z, z) \leq K_{\Omega \cap U}(z, z)$$

and

$$S_{\Omega}(z, z) \lesssim S_{\Omega \cap U}(z, z)$$

for z near z^0 .

- For any harmonic function f on Ω , $1 < p < \infty$,

$$\limsup_{\varepsilon \rightarrow 0^+} \int_{b\Omega_\varepsilon} |f|^p dS = \limsup_{r \rightarrow 1^-} (1-r) \int_{\Omega} |f(z)|^p \delta^{-r}(z) dV.$$

- For any harmonic function f on Ω , $1 < p < \infty$,

$$\limsup_{\varepsilon \rightarrow 0^+} \int_{b\Omega_\varepsilon} |f|^p dS = \limsup_{r \rightarrow 1^-} (1-r) \int_{\Omega} |f(z)|^p \delta^{-r}(z) dV.$$

- Given $z \in \Omega$ and $f \in A^2(\Omega)$, find $g \in H(\Omega)$,
 $g(z) = f(z)$,

$$(1-r) \int_{\Omega} |g|^2 \delta^{-r} \lesssim \frac{1}{\delta(z)} \int_{\Omega} |f|^2 \Rightarrow \frac{S(z, z)}{K(z, z)} \gtrsim \delta(z)$$

Hörmander's estimates

- ▶ The $\bar{\partial}$ -Problem: $\Omega \subset\subset \mathbb{C}^n$. Given $(0, 1)$ -form $v = \sum_{j=1}^n v_j d\bar{z}_j$. Find u such that

$$\bar{\partial}u = \sum_{j=1}^n \frac{\partial u}{\partial \bar{z}_j} d\bar{z}_j = v, \quad (\bar{\partial}\text{-equation})$$

provided $\bar{\partial}v = 0$.

Comparison of the Bergman and Szegő kernels

Pluricomplex Green Function

Upper Estimates

Lower estimates

Hörmander's estimates

- ▶ The $\bar{\partial}$ -Problem: $\Omega \subset\subset \mathbb{C}^n$. Given $(0, 1)$ -form $v = \sum_{j=1}^n v_j d\bar{z}_j$. Find u such that

$$\bar{\partial}u = \sum_{j=1}^n \frac{\partial u}{\partial \bar{z}_j} d\bar{z}_j = v, \quad (\bar{\partial}\text{-equation})$$

provided $\bar{\partial}v = 0$.

- ▶ Hörmander (65): Ω is pseudoconvex. $\psi \in psh(\Omega)$. Suppose $\partial\bar{\partial}\psi \geq c(z)\partial\bar{\partial}|z|^2$ for a positive continuous function $c(z)$. Then the $\bar{\partial}$ -equation has a solution satisfying

$$\int_{\Omega} |u|^2 e^{-\psi} dV \leq \int_{\Omega} \frac{|v|^2}{c(z)} e^{-\psi} dV < \infty.$$

Demailly's estimates

- ▶ Demailly(82):

$$\int |u|^2 e^{-\psi} \leq \int |v|_{\partial\bar{\partial}\psi}^2 e^{-\psi}.$$

where

$$|v|_{\partial\bar{\partial}\psi}^2 = \sup\{|\langle v, X \rangle|; \quad |X|_{\partial\bar{\partial}\psi} \leq 1\}$$

and

$$|X|_{\partial\bar{\partial}\psi} = \sum_{j,k=1}^n \frac{\partial^2 \psi}{\partial z_j \partial \bar{z}_k} X_j \bar{X}_k.$$

main results

Basic properties of
the kernels

Weighted
 L^2 -estimates for
the $\bar{\partial}$ -operator

Pluricomplex
Green Function

Upper Estimates

Lower estimates

Demailly's estimates

- ▶ Demailly(82):

$$\int |u|^2 e^{-\psi} \leq \int |v|_{\partial\bar{\partial}\psi}^2 e^{-\psi}.$$

where

$$|v|_{\partial\bar{\partial}\psi}^2 = \sup\{|\langle v, X \rangle|; \quad |X|_{\partial\bar{\partial}\psi} \leq 1\}$$

and

$$|X|_{\partial\bar{\partial}\psi} = \sum_{j,k=1}^n \frac{\partial^2 \psi}{\partial z_j \partial \bar{z}_k} X_j \bar{X}_k.$$

- ▶ If $u \perp \mathcal{N}(\bar{\partial})$ in $L^2(\Omega, e^{-\psi})$, then

$$\int_{\Omega} |u|^2 e^{-\psi} \leq \int_{\Omega} |\bar{\partial}u|_{\partial\bar{\partial}\psi}^2 e^{-\psi}.$$

Berndtsson's Estimates

- ▶ Berndtsson (01): $\rho \in C^2(\Omega)$, $\rho < 0$. Suppose $\exists \psi \in psh(\Omega) \cap C^2(\Omega)$ such that

$$\Theta = (-\rho)\partial\bar{\partial}\psi + \partial\bar{\partial}\rho > 0.$$

If $u \perp \mathcal{N}(\bar{\partial})$ in $L^2(\Omega, e^{-\psi})$, then $\forall r \in (0, 1)$,

$$(1-r) \int |u|^2 (-\rho)^{-r} e^{-\psi} \leq \frac{1}{r} \int |v|_{\Theta}^2 (-\rho)^{1-r} e^{-\psi}$$

Comparison of the
Bergman and
Szegő kernels

Siqi Fu
based on joint

Chen

Introduction:
Background and
main results

Basic properties of
the kernels

Weighted
 L^2 -estimates for
the $\bar{\partial}$ -operator

Pluricomplex
Green Function

Upper Estimates

Lower estimates

Berndtsson's Estimates

- ▶ Berndtsson (01): $\rho \in C^2(\Omega)$, $\rho < 0$. Suppose $\exists \psi \in psh(\Omega) \cap C^2(\Omega)$ such that

$$\Theta = (-\rho)\partial\bar{\partial}\psi + \partial\bar{\partial}\rho > 0.$$

If $u \perp \mathcal{N}(\bar{\partial})$ in $L^2(\Omega, e^{-\psi})$, then $\forall r \in (0, 1)$,

$$(1-r) \int |u|^2 (-\rho)^{-r} e^{-\psi} \leq \frac{1}{r} \int |v|_{\Theta}^2 (-\rho)^{1-r} e^{-\psi}$$

- ▶ Demailly \Rightarrow Berndtsson: Let

$$\varphi = \psi - r \log(-\rho) = \psi + \phi.$$

Then $ue^{\phi} \perp \mathcal{N}(\bar{\partial})$ in $L^2(\Omega, e^{-\varphi})$.

Berndtsson's Estimates

- ▶ Berndtsson (01): $\rho \in C^2(\Omega)$, $\rho < 0$. Suppose $\exists \psi \in psh(\Omega) \cap C^2(\Omega)$ such that

$$\Theta = (-\rho)\partial\bar{\partial}\psi + \partial\bar{\partial}\rho > 0.$$

If $u \perp \mathcal{N}(\bar{\partial})$ in $L^2(\Omega, e^{-\psi})$, then $\forall r \in (0, 1)$,

$$(1-r) \int |u|^2 (-\rho)^{-r} e^{-\psi} \leq \frac{1}{r} \int |v|_{\Theta}^2 (-\rho)^{1-r} e^{-\psi}$$

- ▶ Demailly \Rightarrow Berndtsson: Let

$$\varphi = \psi - r \log(-\rho) = \psi + \phi.$$

Then $ue^{\phi} \perp \mathcal{N}(\bar{\partial})$ in $L^2(\Omega, e^{-\varphi})$. Applying Demailly,

$$\int_{\Omega} |u|^2 e^{\phi-\psi} \leq \int_{\Omega} |\bar{\partial}u + u\bar{\partial}\phi|_{\partial\bar{\partial}\varphi}^2 e^{\phi-\psi}.$$

- Berndtsson then follows from

$$\partial\bar{\partial}\varphi \geq \frac{r}{-\rho} + \frac{1}{r}\partial\psi \wedge \bar{\partial}\psi$$

and Cauchy-Schwarz:

$$|\bar{\partial}u + u\bar{\partial}\phi|_{\partial\bar{\partial}\varphi}^2 \leq r|u|^2 + \frac{1}{r}|\bar{\partial}u|_{\Theta}^2(-\rho)$$

Pluricomplex Green function

$\Omega \subset\subset \mathbb{C}^n$. Pluricomplex Green function:

$$g(z, w) = \sup\{u(z) \mid u \in psh(\Omega), u < 0, \\ \limsup_{z \rightarrow w} (u(z) - \log |z - w|) < \infty\}.$$

Upper estimates

$b\Omega$ pseudoconvex, C^2 -smooth, $\forall \varepsilon \in (0, 1)$,

$$\frac{S(z, z)}{K(z, z)} \lesssim \delta(z) |\log \delta(z)|^{n/\varepsilon}$$

- ▶ Step 1 (Chen/Herbot; 99): Ω bounded, pseudoconvex

$$K(z, z) \gtrsim K_{\{g(\cdot, z) < -1\}}(z, z)$$

Proof: Given f holomorphic on $\Omega_z = \{g(\cdot, z) < -1\}$.

Solve $\bar{\partial}u = v$. Applying Demailly with weight

$$\psi = 2ng(\cdot, z) - \log(-g(\cdot, z) + 1); v = \bar{\partial}\chi(-\log(-g(\cdot, z)))f$$

where χ is cut-off function = 1 on $(-\infty, -1)$, and = 0 on $(0, \infty)$. Then let $g = \chi(-\log(-g(\cdot, z)))f - u$.

Upper estimates

$b\Omega$ pseudoconvex, C^2 -smooth, $\forall \varepsilon \in (0, 1)$,

$$\frac{S(z, z)}{K(z, z)} \lesssim \delta(z) |\log \delta(z)|^{n/\varepsilon}$$

Solve $\bar{\partial}u = v$. Applying Demailly with weight

$$\psi = 2ng(\cdot, z) - \log(-g(\cdot, z) + 1); v = \bar{\partial}\chi(-\log(-g(\cdot, z)))f$$

where χ is cut-off function = 1 on $(-\infty, -1)$, and = 0 on $(0, \infty)$. Then let $g = \chi(-\log(-g(\cdot, z)))f - u$.

- ▶ Step 2: Applying Blocki. Write $\delta = \delta(z)$. For any $f \in H^2(\Omega)$.

$$\int_{\Omega_z} |f|^2 \leq \int_0^{\delta |\log \delta|^{n/\varepsilon}} dt \int_{\{\delta=t\}} |f|^2 \lesssim \|f\|_{b\Omega}^2 \delta |\log \delta|^{n/\varepsilon}.$$

- ▶ Step 3: Use the localization properties of the Bergman and Szegő kernels to localize the problem.

Chen

Introduction:
Background and
main results

Basic properties of
the kernels

Weighted
 L^2 -estimates for
the $\bar{\partial}$ -operator

Pluricomplex
Green Function

Upper Estimates

Lower estimates

- ▶ Notice that

$$\text{Supp } \bar{\partial}\chi(*) \subset \{-e \leq g(\cdot, w) \leq -1\} \subset \{C\delta|\delta|^{-1/\varepsilon} \leq \delta(\cdot)\}$$

and

$$\partial\bar{\partial}\psi \geq \partial \log(-g(\cdot, w) + 1) \wedge \bar{\partial} \log(-g(\cdot, w) + 1)$$

Hence $|\bar{\partial}\chi|_{\partial\bar{\partial}\psi} \lesssim 1$.

- ▶ By Demailly:

$$\int_{\Omega} |u|^2 e^{-\psi} \leq \int_{\Omega} |v|_{\partial\bar{\partial}\psi}^2 e^{-\psi} < \infty.$$

Hence $u(w) = 0$.

- ▶ Notice that

$$\text{Supp } \bar{\partial}\chi(*) \subset \{-e \leq g(\cdot, w) \leq -1\} \subset \{C\delta|\delta|^{-1/\varepsilon} \leq \delta(\cdot)\}$$

and

$$\partial\bar{\partial}\psi \geq \partial \log(-g(\cdot, w) + 1) \wedge \bar{\partial} \log(-g(\cdot, w) + 1)$$

Hence $|\bar{\partial}\chi|_{\partial\bar{\partial}\psi} \lesssim 1$.

- ▶ By Demailly:

$$\int_{\Omega} |u|^2 e^{-\psi} \leq \int_{\Omega} |v|_{\partial\bar{\partial}\psi}^2 e^{-\psi} < \infty.$$

Hence $u(w) = 0$.

- ▶ Let $g = \chi(-\log(-g(\cdot, z)))f - u$. Then g is holomorphic on Ω , $g(w) = f(w)$, and $g = -u$ near $b\Omega$.

- ▶ Notice that

$$\text{Supp } \bar{\partial}\chi(*) \subset \{-e \leq g(\cdot, w) \leq -1\} \subset \{C\delta|\delta|^{-1/\varepsilon} \leq \delta(\cdot)\}$$

and

$$\partial\bar{\partial}\psi \geq \partial \log(-g(\cdot, w) + 1) \wedge \bar{\partial} \log(-g(\cdot, w) + 1)$$

Hence $|\bar{\partial}\chi|_{\partial\bar{\partial}\psi} \lesssim 1$.
