

Research Interests (BIRS 2015: mini-talk)

Bernd Schulze

Lancaster University

July 2015

- (1) Symmetric frameworks and related structures

- (1) Symmetric frameworks and related structures
 - (a) Symmetric combinatorial rigidity of finite frameworks (forced and incidental symmetry)

- (1) Symmetric frameworks and related structures
 - (a) Symmetric combinatorial rigidity of finite frameworks (forced and incidental symmetry)
 - (b) Symmetric global/universal rigidity

- (1) **Symmetric frameworks and related structures**
 - (a) Symmetric combinatorial rigidity of finite frameworks (forced and incidental symmetry)
 - (b) Symmetric global/universal rigidity
 - (c) Applications to robotics and molecular stability

- (1) Symmetric frameworks and related structures
 - (a) Symmetric combinatorial rigidity of finite frameworks (forced and incidental symmetry)
 - (b) Symmetric global/universal rigidity
 - (c) Applications to robotics and molecular stability

- (2) Extending results to general normed spaces

- (1) Symmetric frameworks and related structures
 - (a) Symmetric combinatorial rigidity of finite frameworks (forced and incidental symmetry)
 - (b) Symmetric global/universal rigidity
 - (c) Applications to robotics and molecular stability

- (2) Extending results to general normed spaces

- (3) Rigidity of infinite structures

- (a) Characterise symmetry-generic forced-symmetric rigid frameworks in the plane with even-order dihedral symmetry

- (a) Characterise symmetry-generic forced-symmetric rigid frameworks in the plane with even-order dihedral symmetry

- (b) Characterise symmetry-generic incidentally-symmetric infinitesimally rigid frameworks in the plane with even-order cyclic symmetry

- (a) Characterise symmetry-generic forced-symmetric rigid frameworks in the plane with even-order dihedral symmetry
- (b) Characterise symmetry-generic incidentally-symmetric infinitesimally rigid frameworks in the plane with even-order cyclic symmetry
- (c) Characterise symmetry-generic forced-symmetric globally rigid frameworks in the plane with reflection (or cyclic) symmetry
