## Reconfiguration Problems

Reconfiguration problems arise when we wish to find a step-by-step transformation between two feasible solutions of a problem such that all intermediate results are also feasible.

【Independent Set Reconfiguration under Token Sliding rule】

| Input: | A graph $G$ and vertex sets $S$ and $T$ of $G$. |
| ---: | :--- |
| Question: | Is there a TS-sequence between $S$ and $T ?$ |

Token Sliding rule: A token can be moved to only an adjacent vertex

## Reconfiguration Problems

Reconfiguration problems arise when we wish to find a step-by-step transformation between two feasible solutions of a problem such that all intermediate results are also feasible.

【Independent Set Reconfiguration under Token Sliding rule】

| Input: | A graph $G$ and vertex sets $S$ and $T$ of $G$. |
| ---: | :--- |
| Question: | Is there a TS-sequence between $S$ and $T$ ? |

Token Sliding rule: A token can be moved to only an adjacent vertex

## Regular Induced Subgraphs

- We denote by $G[U]$ the subgraph of $G$ induced by $U$.
- We say that a vertex subset $U$ of a graph $G$ is a d-regular set of $G$ if $G[U]$ is $d$-regular.

Vertex subsets $S_{1}, S_{2}, S_{3} \subseteq U$
3-regular Induced subgraph $G[U]$

## Regular Induced Subgraph Reconfiguration

| $d$-Regular Induced Subgraph Reconfiguration under $R\left(R I S R_{d}\right)$ |  |
| ---: | :--- | :--- |
| Input: | A graph G and d-regular set $\boldsymbol{U}^{\boldsymbol{s}}$ and $\boldsymbol{U}^{\boldsymbol{t}}$ of G. |
| Question: | Is there an R-sequence between $\boldsymbol{U}^{\boldsymbol{s}}$ and $\boldsymbol{U}^{\boldsymbol{t}}$ ? |

Reconfiguration rule ( $R \in T J, T S$ )

- TJ:Token Jumping
- TS:Token Sliding

## Reconfiguration Rule

TJ(Token Jumping)

- $U_{i} \leftrightarrow U_{i+1}$ under TJ if $\left|U_{i} \backslash U_{i+1}\right|=\left|U_{i+1} \backslash U_{i}\right|=1$

TS(Token Sliding)

- $U_{i} \leftrightarrow U_{i+1}$ under TS if $U_{i} \backslash U_{i+1}=\{v\}, U_{i+1} \backslash U_{i}=\{w\}$, and $v w \in E(G)$

## Regular Induced Subgraph Reconfiguration

| $d$-Regular Induced Subgraph Reconfiguration under $R\left(R I S R_{d}\right)$ |  |
| ---: | :--- |
| Input: | A graph G and d-regular set $\boldsymbol{U}^{\boldsymbol{s}}$ and $\boldsymbol{U}^{\boldsymbol{t}}$ of G |
| Question: | Is there an R-sequence between $U^{s}$ and $U^{t} ?$ |

Reconfiguration rule ( $R \in T J, T S$ )

- TJ:Token Jumping
- TS:Token Sliding

## Regular Induced Subgraph Reconfiguration

| $d$-Regular Induced Subgraph Reconfiguration under $R\left(R I S R_{d}\right)$ |  |
| ---: | :--- |
| Input: | A graph G and d-regular set $\boldsymbol{U}^{\boldsymbol{s}}$ and $\boldsymbol{U}^{\boldsymbol{t}}$ of G |
| Question: | Is there an R-sequence between $U^{s}$ and $U^{t} ?$ |

Example

$$
\begin{aligned}
& \text { Reconfiguration rule TJ (Token Jumping) } \\
& \mathrm{d}=1, \boldsymbol{R I S}_{\boldsymbol{I}}
\end{aligned}
$$

## TJ-sequence

$U^{s} \quad U^{t}$

## Regular Induced Subgraph Reconfiguration

| $d$-Regular Induced Subgraph Reconfiguration under $R\left(R I S R_{d}\right)$ |  |
| ---: | :--- |
| Input: | A graph G and d-regular set $\boldsymbol{U}^{\boldsymbol{s}}$ and $\boldsymbol{U}^{\boldsymbol{t}}$ of G |
| Question: | Is there an R-sequence between $U^{s}$ and $U^{t} ?$ |

Example

$$
\begin{aligned}
& \text { Reconfiguration rule TJ (Token Jumping) } \\
& \mathrm{d}=1, \boldsymbol{R I S}_{\boldsymbol{I}}^{\boldsymbol{\boldsymbol { 1 }}}
\end{aligned}
$$

$U^{S}$

$U_{1}$

$U^{t}$

## Regular Induced Subgraph Reconfiguration

| $d$-Regular Induced Subgraph Reconfiguration under $R\left(R I S R_{d}\right)$ |  |
| ---: | :--- |
| Input: | A graph G and d-regular set $\boldsymbol{U}^{\boldsymbol{s}}$ and $\boldsymbol{U}^{\boldsymbol{t}}$ of G |
| Question: | Is there an R-sequence between $U^{s}$ and $U^{t} ?$ |

Example

$$
\begin{aligned}
& \text { Reconfiguration rule TJ (Token Jumping) } \\
& \text { d=1, } \boldsymbol{R I S \boldsymbol { S } _ { \mathbf { 1 } }}
\end{aligned}
$$

$U^{t}$

## Regular Induced Subgraph Reconfiguration

| $d$-Regular Induced Subgraph Reconfiguration under $R\left(R I S R_{d}\right)$ |  |
| ---: | :--- |
| Input: | A graph G and d-regular set $\boldsymbol{U}^{\boldsymbol{s}}$ and $\boldsymbol{U}^{\boldsymbol{t}}$ of G |
| Question: | Is there an R-sequence between $U^{s}$ and $U^{t} ?$ |

Example

```
Reconfiguration rule TJ (Token Jumping)
```

$U^{S}$

$U_{1}$

$U_{2}$

$U_{3}$

$U^{t}$

## Regular Induced Subgraph Reconfiguration

| $d$-Regular Induced Subgraph Reconfiguration under $R\left(R I S R_{d}\right)$ |  |
| ---: | :--- |
| Input: | A graph G and d-regular set $\boldsymbol{U}^{\boldsymbol{s}}$ and $\boldsymbol{U}^{\boldsymbol{t}}$ of G |
| Question: | Is there an R-sequence between $U^{s}$ and $U^{t} ?$ |

Example

```
Reconfiguration rule TJ (Token Jumping)
```

$U^{S}$

$U_{1}$

$U_{2}$

$U_{3}$

$U_{4}$

$U^{t}$

## Regular Induced Subgraph Reconfiguration

| $d$-Regular Induced Subgraph Reconfiguration under $R\left(R I S R_{d}\right)$ |  |
| ---: | :--- |
| Input: | A graph G and d-regular set $\boldsymbol{U}^{\boldsymbol{s}}$ and $\boldsymbol{U}^{\boldsymbol{t}}$ of G |
| Question: | Is there an R-sequence between $U^{s}$ and $U^{t} ?$ |

Example
Reconfiguration rule TJ (Token Jumping)
$\mathrm{d}=1, \boldsymbol{R} \boldsymbol{I} \boldsymbol{S} \boldsymbol{R}_{\mathbf{1}}$

23

## Regular Induced Subgraph Reconfiguration

| $d$-Regular Induced Subgraph Reconfiguration under $R\left(R I S R_{d}\right)$ |  |
| ---: | :--- |
| Input: | A graph G and d-regular set $\boldsymbol{U}^{\boldsymbol{s}}$ and $\boldsymbol{U}^{\boldsymbol{t}}$ of G |
| Question: | Is there an R-sequence between $U^{s}$ and $U^{t} ?$ |

Example
Reconfiguration rule TJ (Token Jumping)
$\mathrm{d}=1, \boldsymbol{R} \boldsymbol{I} \boldsymbol{S} \boldsymbol{R}_{\mathbf{1}}$

## RISR $_{d}$

| $d$-Regular Induced Subgraph Reconfiguration under $R\left(R I S R_{d}\right)$ |  |
| ---: | :--- |
| Input: | A graph G and d-regular set $\boldsymbol{U}^{\boldsymbol{s}}$ and $\boldsymbol{U}^{\boldsymbol{t}}$ of G |
| Question: | Is there an R-sequence between $U^{s}$ and $U^{t} ?$ |

Reconfiguration rule ( $R \in T J, T S$ )

- TJ:Token Jumping
- TS:Token Sliding

## $\boldsymbol{R I S R}_{\boldsymbol{d}}$

| $d$-Regular Induced Subgraph Reconfiguration under $R\left(R I S R_{d}\right)$ |  |
| ---: | :--- |
| Input: | A graph G and d-regular set $\boldsymbol{U}^{\boldsymbol{s}}$ and $\boldsymbol{U}^{\boldsymbol{t}}$ of G |
| Question: | Is there an R-sequence between $U^{\boldsymbol{S}}$ and $U^{t} ?$ |

Example

$$
\begin{aligned}
& \text { Reconfiguration rule TS (token Sliding) } \\
& \text { d=1, } \boldsymbol{R I S R}_{\mathbf{1}}
\end{aligned}
$$

Is there a TS-sequence?
$U^{s} \quad U^{t}$

## $\boldsymbol{R I S R}_{\boldsymbol{d}}$

| $d$-Regular Induced Subgraph Reconfiguration under $R\left(R I S R_{d}\right)$ |  |
| ---: | :--- |
| Input: | A graph G and d-regular set $\boldsymbol{U}^{\boldsymbol{s}}$ and $\boldsymbol{U}^{\boldsymbol{t}}$ of G |
| Question: | Is there an R-sequence between $U^{\boldsymbol{S}}$ and $U^{t} ?$ |

Example

$$
\begin{aligned}
& \text { Reconfiguration rule TS (token Sliding) } \\
& \text { d=1, } \boldsymbol{R I S R}_{\mathbf{1}}
\end{aligned}
$$

## There is no TS-sequence!

$U^{s}$

$U^{t}$

## RISR $_{d}$

## RISR $_{d}$

| $d$-Regular Induced Subgraph Reconfiguration under $R\left(R I S R_{d}\right)$ |  |
| ---: | :--- |
| Input: | A graph G and d-regular set $\boldsymbol{U}^{\boldsymbol{s}}$ and $\boldsymbol{U}^{\boldsymbol{t}}$ of G |
| Question: | Is there an R-sequence between $U^{s}$ and $U^{t} ?$ |

Reconfiguration rule ( $R \in T J, T S$ )

- TJ:Token Jumping
- TS:Token Sliding

## Graph class

Bipartite graph
A graph is bipartite if its vertex set can be partitioned into 2 independent sets.

Chordal graph
A graph is chordal if every cycle of length at least 4 has a chord.

## CRISR $_{d}$

| Connected $\boldsymbol{d}$-Regular Induced Subgraph Reconfiguration under $\boldsymbol{R}\left(\right.$ CRISR $\left._{\boldsymbol{d}}\right)$ |  |  |
| ---: | :--- | :--- |
| Input: | A graph G and connected d-regular set $\boldsymbol{U}^{\boldsymbol{s}}$ and $\boldsymbol{U}^{\boldsymbol{t}}$ of G |  |
| Question: | Is there an R-sequence between $U^{s}$ and $U^{t} ?$ |  |

Reconfiguration rule ( $\mathrm{R} \in \mathrm{TJ}, \mathrm{TS}$ )

- TJ:Token Jumping
- TS:Token Sliding
